Nylonaffald, der ellers forurener jorden, omdannes til ECONYL® regenereret nylon. Det er præcis det samme som helt nyt nylon og kan genbruges, genskabes og omstøbes igen og igen. Det betyder, at du kan skabe nye produkter og købe nye produkter uden at skulle bruge nye ressourcer.

ECONYL® in a nutshell.

ECONYL® is the brand fibre of an Italian yarn manufacturer. This brand certifies that it is a chemically recycled fibre which is regenerated from polyamide waste such as old carpets, fishing nets or fabric remnants. The quality of the regenerated fibre ECONYL® is equal to that of conventionally produced polyamide, but its production is much more environmentally friendly. What could be more useful than producing unique carpets from recycled materials?
